## KITE, The European mobile worker's kit

### Functional specifications for the Europass-CV plugin for Blogs.

#### Features

- **Edition of a complete CV following the Europass format** : The plugin allows the user to easily fill in his/her CV using a form following the Europass format. This form is fully integrated in the user's usual blog. Links to any kind of media (pictures, certificate, video or audio record) can be added to the CV. All the data will be stored following the HR-XML SEP 2.4 specifications that will be extended to cover all the Europass CV specification. If needed, the user will be able to add fields not included in the Europass format but present in the HR-XML specification.
- **Edition of a multilingual CV**: The entire interface will be multilingual, the user interface, as well as the content of the Europass-CV, could be expressed in several languages.
- **Targeted CV composition**: The user customize his/her targeted CVs corresponding to a particular job search or depending on her/his personal or professional needs and goals. To create a targeted CV, s/he selects and orders the different parts of the CV s/he wants to include. S/he needs to name it to save it.
- **Exports selection**: The user selects his/her publishing format for each targeted CV :
  - on line XHTML Europass CV
  - integrated in the Blog following the Europass CV presentation
  - PDF Europass CV
  - ODT Europass CV (Open Document Text)
  - HR-XML
  - FOAF (Friend Of A Friend)
- **Access right definition**: The complete CV and the targeted CV administration is only accessible for the user in his/her secured blog administration interface. The user, who have complete control on his/her personal informations, can open or attribute access rights and is able to cordon off portions of the CV data. With the plugin the user is able to publish a version of the CV for an open consultation through the Internet or s/he can publish protected CV's in a secure location. In this case, Internet access to targeted CV's is limited by the user depending on his/her personal or professional needs and goals. Each export of a targeted CV can be protected by an access code defined by the user.

#### Development target

There are a lot of blogs applications, but there are no specification to enable a complete integration with all of them. Nevertheless, the plugin will be developed to be easily adapted for any type of blog. The testing phase will be carried out with widely used and most popular blogs that are under a free software licence, respecting interoperability and accesibility standards and having an ongoing activity with an important community. The selected blogs are : WordPress 2.0, ELGG, and DotClear 2.0.

#### Licence

The plugin will be licenced under the GPL 2 or later depending on its release.
